Title of the manuscript: Data error due to phenol used as a positive control in cytotoxicity test methods

The manuscript describes the results from a carefully designed study to evaluate the possible interference of phenol in cytotoxicity assay using multi well titer plates. The manuscript data will be useful for the researchers to consider some precautions while using phenol as a control. The manuscript needs some minor revision as given below.

Specific comments:

1. Language: The observations made from the study should be written in past tense.
2. Summary, line 6: Replace 'text' with 'test'
3. Summary, line 13: Replace "Cell culture viability" with "cell viability". Same should be followed throughout the manuscript.
4. Summary, line 20: Write 'lost' as 'loss' in the second half.
5. Introduction, line 18: Replace 'respond' with 'response'
6. Materials and methods, Cell culture, line 4: Replace "culture mediums" with "culture media"
7. Results, phenol concentrations lethal to ARPE-19 cell culture, line 4: Correct the spelling of 'formazone' as 'formazan'
8. Results, Short period phenol incubation effect, paragraph 2, line 1: Replace '92 cell culture plate' with '96 well microtiter plate'
9. Discussion and conclusion, line 1: Correct the spelling of 'personal' as 'personnel'
10. Discussion and conclusion, paragraph 2, line 7: 'resistance' shall be written as 'sensitivity'
11. Do not include the figure number in discussion part.
12. Keep the figure legend crisp so as to give minimum information to explain the figure clearly
13. Eliminate all the additional information from discussion part.
14. In discussion, include recommendations for avoiding error in cytotoxicity experiments that use phenol as a positive control
15. Figure 2, 0.2 mg/ml, 60 min x 72 h, viability is given as 0%. Is this an error? Provide justification
16. Figure 3: Details can be an outcome from poor experimental procedures. This data need not be given.
17. Figure 3, legend, line 5: Rectify the spelling of 'vertex' as 'vortex'
18. Figure 5, legend, line 3: Replace "posterior" with "post"
19. Check the manuscript for minor grammatical errors throughout.
20. Discussion section can be revised precisely with less content.
